SUMMARY 3

USE OF FUNDS 3

SUMMARY

SB 535 in the 2025 Legislative Session created an insurance premium support account in the state special revenue fund.

Revenue into this fund comes from licensed experimental treatment centers. Per the statute, those centers must allocate 2% of their net annual profits to support access to experimental treatments and health care for qualifying Montana residents. This may be fulfilled either by providing free experimental treatment or by contributing 2% of the center's net annual profits to the insurance premium support account.

The money in the account is allocated to the Department of Public Health and Human Services to fund health insurance premiums for Montana residents who:

a) Purchase health insurance on the federal health insurance marketplace; and
b) Have an income between 139% and 400% of the federal poverty level.

USE OF FUNDS

As of September 1, 2026, no experimental treatment centers have become licensed in the state of Montana. As such, there has been no activity to date in the insurance premium support account.
